Summary

Senior full-stack engineer, 14+ years in production TypeScript. I ship SaaS and review generated diffs for API design, database and cache behavior, auth, and React or Next.js rendering and state.

Claude Code, Cursor, and Codex. Create skills, use official MCP servers, and follow through with a complete implementation when the first pass needs more work.

Experience

Senior Software Engineer, WealthPark – Tokyo, Japan (Remote) Apr 2021 – Present

- Ship operator, owner, and valuation apps in React and Next.js. Review frontend architecture: state, extra renders, and whether browser APIs match what the UI claims.
- REST and GraphQL over PostgreSQL for chat, documents, and activities. Check N+1 fetches, cache misses, and caching strategy; store-management caching cut load time by up to 2698%.
- Claude Code, Cursor, and Codex. Create skills. Wire official MCP servers. Generated changes get tests, types, and an auth or permission check before they touch product data.
- Mentored juniors on design and testing, and on taking a first-pass patch through review until it is ready to ship.

Full Stack Engineer, MerchantSpring – Melbourne, Australia (Remote) Sept 2020 – Apr 2021

- Node.js ingest from Amazon, eBay, Walmart, and Shopify. Map marketplace payloads into our models and keep merchant accounts separate.
- Jest and Cypress on the pipelines. Demoed against live marketplace behavior, including the staging failures.

Front End Engineer, Rakuten – Tokyo, Japan June 2018 – Sept 2020

- React search and booking on a live travel product. Unit, integration, and snapshot tests on booking-critical paths.

Software Engineer, Bosch, NEC, Denso – Tokyo / Manila Apr 2014 – June 2018

- Bosch: VIN lookup and CAN diagnostics against a central vehicle database (TDD, GRADE-X).
- NEC: network and traffic sniffer analysis, with unit, functional, and integration tests.
- Denso: ECU software from Japan specs, including a complex spec that passed unit tests with zero defects on first run.

Selected platforms

PotatoV3 (operator console) WealthPark

- Admin app for ownership, owner communication, and daily ops (TypeScript, React, Next.js, REST, WebSocket).

Rakuten Travel Rakuten

- Supplier and consumer travel search and booking. Reusable React components, state, and tests on booking-critical paths (JavaScript, React, Flux, Redux, Jest, Cypress).

Alliance Diagnostic Tool Bosch

- VIN-based diagnostics for Nissan, Mitsubishi, and Renault against a central vehicle database (JavaScript, Angular, Jest).

MerchantSpring Seller Tool MerchantSpring

- Marketplace ingest and analytics (Node.js, Express, MySQL, MongoDB, Docker, Terraform).

Code review

Frontend: React and Next.js structure, state, rendering cost, and whether the UI matches the APIs it calls.

Backend: REST and GraphQL design, database modeling, caching, N+1 queries, and how services talk to each other.

Auth and access: login, permissions, and whether a generated change would expose data it should not.

Write the prompt or skill with a real constraint, then finish with types, tests, and the failure path.

Skills

Frontend: React, Next.js, TypeScript, state management, rendering performance, WebSocket UIs, Jest, Cypress

Backend and APIs: REST, GraphQL, PostgreSQL, MySQL, MongoDB, caching, N+1 and query performance, Node.js, NestJS, C#, Rust

Auth and infra: Authentication, permission checks, Docker, Terraform, CI/CD, networking diagnostics

AI tooling: Claude Code, Cursor, Codex, official MCP servers, skills, review of generated diffs

Education

Rizal Technological University, BS in Computer Engineering – Mandaluyong, Philippines Mar 2008 – Mar 2013

Certifications

JLPT: Japanese Language Proficiency Test N3

JTEST: D Level
