Summary

Senior full-stack engineer, 14+ years, mostly remote. I ship TypeScript products that sit on real operational data: people, documents, messages, tasks, and workflows. I take a build from a messy request to something operators actually use, including the integrations and data model underneath.

I work in Claude Code, Cursor, and Codex every day. I write skills and MCP servers so the tools follow our repo and review rules. Generated work is a draft. I still debug, test, and review it, because models miss edge cases, leak context, and invent APIs that do not exist.

Experience

Senior Software Engineer, WealthPark – Tokyo, Japan (Remote) Apr 2021 – Present

- Owned delivery of the property operations suite: operators, owners, documents, chat, activities, and the marketing work customer success runs. Talked with stakeholders, cut scope, and shipped what they would use.
- Modeled the domain in PostgreSQL-backed GraphQL so chat, documents, and activity streams point at the same records instead of copies that drift.
- Rolled out Claude Code, Cursor, and Codex for engineers and managers. Wrote skills and playbooks. Stood up MCP servers so agents only get the repo, docs, and workflow tools we grant.
- Catch bad model output in review: wrong assumptions, missing tests, and tools that would see product data they should not. Write down what the tools may access.
- Rebuilt store-management caching and cut load time by up to 2698% (slow reads, extra fetches, cache misses). Shared React/TypeScript components across operator, owner, and valuation apps.
- Mentored juniors and set design, testing, and AI-tool conventions so people can ship without waiting on me.

Full Stack Engineer, MerchantSpring – Melbourne, Australia (Remote) Sept 2020 – Apr 2021

- Built Node.js services that ingest merchant shop data from Amazon, eBay, Walmart, and Shopify, map it into our models, and keep each merchant's data separate.
- Shipped multi-account analytics for agencies and investors: per-account datasets, MySQL and MongoDB, Docker, Terraform, CI.
- Covered the pipelines with Jest and Cypress. Demoed to product owners against live marketplace behavior, including the cases that failed in staging.

Front End Engineer, Rakuten – Tokyo, Japan June 2018 – Sept 2020

- Built React search and booking components for a live travel product. Covered booking-critical paths with unit, integration, and snapshot tests.

Software Engineer, Bosch, NEC, Denso – Tokyo / Manila Apr 2014 – June 2018

- Bosch: VIN lookup and CAN diagnostics against a central vehicle database (TDD, GRADE-X).
- NEC: network and traffic sniffer analysis, with unit, functional, and integration tests.
- Denso: ECU software from Japan specs, including a complex spec that passed unit tests with zero defects on first run.

Selected platforms

PotatoV3 — operator console WealthPark

- Admin app for ownership, owner communication, and daily ops. Shipped and iterated with operators (TypeScript, React, Next.js, REST, WebSocket).

Chat Admin + documents WealthPark

- Agent and owner messaging, activities, and documents on one record (React, Redux, WebSocket, REST).

Workflow WealthPark

- Activity streams for expenses, income, and property updates. Operators complete and approve the work.

Owner Web Application WealthPark

- Cash flow, documents, chat, and activities for owners with properties in more than one country (TypeScript, React, GraphQL).

MerchantSpring Seller Tool MerchantSpring

- Marketplace analytics across merchant accounts: ingest, model, and report (Node.js, Express, MySQL, MongoDB, Docker, Terraform).

How I use LLMs

Daily in Claude Code, Cursor, and Codex. Custom skills for build, review, planning, and turning a long discussion into tickets.

MCP servers are the tool boundary. Agents do not get a dump of product records. If a tool would touch tenant data, a person still reviews the change.

I treat model output as a first pass. I check tests, types, and the failure paths. Models are fast at scaffolding and weak at invented APIs, silent data leaks, and anything that only shows up on real data.

Skills

Languages: TypeScript, JavaScript, SQL, C#, Rust, GraphQL

Data & systems: PostgreSQL, MySQL, MongoDB, ingestion from third-party APIs, relational modeling, caching, query performance, Docker, Terraform, CI/CD

Product stack: React, Next.js, Node.js, NestJS, REST, WebSocket, Jest, Cypress

AI tooling: Claude Code, Cursor, Codex, MCP servers, agent skills, review of generated code and specs

Education

Rizal Technological University, BS in Computer Engineering – Mandaluyong, Philippines Mar 2008 – Mar 2013

Certifications

JLPT: Japanese Language Proficiency Test N3

JTEST: D Level
